

For maximum grip with optimal gliding properties.

1) Roughen the kick zone.

Use sand paper to roughen the kick zone and remove dust with Base Tex.

2) Apply Base Green

Base Green serves as an unbeatable base for all klister. It dramatically increases the adhesion of the klister.

3) Iron in

Iron in the base klister and allow the ski to cool down well in the cold.

Tip: After use, clean the iron well using wax remover.

4 Apply the Klister

Apply the klister at even intervals along the kick zone.

5) Cork

Cork the klister with the Plasto cork or rub it into the kick zone with the ball of your hand
