

JetStream is a 100% perfluorocarbon wax and is used as a high-tech finish. This totally synthetic wax takes water and dirt resistance to the limits of what is possible. Abrasion is reduced to a minimum. Because of its absolutely top glide performance, this is a product which belongs to the standard equipment of every ski service technician.

1) Rub on

Rub JetStream onto the prepared ski, applying even pressure.

2) Polish

Polish in firmly with Thermo Pad. The more friction that is produced, the better JetStream adheres to the base.
